Britton Avenue Area Drainage Improvements

The City of Cincinnati's Metropolitan Sewer District, Stormwater Management Utility Division in conjunction with Greater Cincinnati Water Works will install a stormwater drainage system and new water mains in Madisonville in the Britton Avenue area beginning the week of March 21, 2005. Contractor for the project is Trend Construction.

Crews will install the storm sewer system along Kenmore Avenue and in the intersections of Kenmore and Merwin, Britton, Palmetto, and Bramble; along Berwick Avenue, and in the intersections of Berwick and Merwin, Britton, and Palmetto.

The new water mains will be installed in the following grid:

<i>Street</i>	<i>From</i>	<i>To</i>
Merwin Avenue	Plainville Road	Berwick Avenue
Britton Avenue	Plainville Road	Grove Avenue
Palmetta Avenue	Plainville Road	Grove Avenue
Kenmore Avenue	Merwin Avenue	Palmetto Avenue
Berwick Avenue	Merwin Avenue	Palmetto Avenue
Grove Avenue	Britton Avenue	Palmetto Avenue

The sewer system will help alleviate stormwater ponding, which happens when rain water collects in low spots with no inlet to allow it into the storm sewer system. The new water mains are a system upgrade.

The contractor will maintain access to residences during construction, but this will be impossible at times during pipe installation directly in front of driveways. The contractor may also restrict parking with temporary "No Parking" signs in the area near the construction. The project should last eight to nine months.
